## HomeFree at Care Centers - Creating Safer Environments

**HomeFree at Care Centers** performs real time, wireless monitoring of residents in various types of facilities and their surroundings. **HomeFree's** unique wireless platform offers wandering and nurse call solutions.

**HomeFree at Care Centers** can be easily integrated with other communication systems as needed.

## Revolutionizing Wireless Wandering Solutions

Care Centers, hosting special needs residents, require an efficient solution for wandering, the most common implication of dementia.

### Active, Continuous Monitoring

- **Real-time** indication of residents' location by areas
- **Automatic** alerts upon residents leaving or entering pre-defined areas
- **Immediate** door & exit alerts; automatic locking
- **Prompt** staff pager alerts including resident's identification, area location and nature of alarm

### Innovative Personal Watcher™

**HomeFree Personal Watcher™** is a uniquely designed wristwatch worn by the residents. It continuously sends a silent signal to the Wireless Monitoring Base Unit.

- Lightweight, hypoallergenic and water-resistant
- Band removal and cut-band alarms
- Motion and body sensors
- De-activation feature for extended battery functionality
- Low battery indication

## Residents Locating Capability

The system divides the premises into virtual, user-defined areas. When a resident, wearing the Personal Watcher, leaves or enters a restricted area or approaches designated exits, the system automatically alerts staff members by pager. Similar alerts are induced upon using the nurse call pendant or removal of the Personal Watcher. Each pager alert gives the staff members a clear text indication of the residents identity, type of event and last area location.

## Simple Installation & Operation

**HomeFree at Care Centers** systems are wireless and easy to install. **HomeFree** wall mounted Wireless Monitoring Units enable monitoring of facilities of various shapes and sizes including porches and outdoor areas.

Personal Watchers, worn by residents, continuously send silent signals through the wireless network to the base unit for processing and distribution of alerts to staff pagers. The base unit runs on a standard computer, featuring user-friendly software.

## Integrated Platform

The system can be easily integrated with other communication systems such as hard-wired Nurse Call, DECT and paging systems.

## Full Compatibility with HomeFree at Home

**HomeFree's** line of products includes **HomeFree at Home**, a compatible monitoring system for the residential and private home setting. Individuals wearing the Personal Watcher can be seamlessly transferred to the supervision of the **HomeFree at Home** unit.

## HomeFree Systems Ltd.- A Trustworthy Business Partner

**HomeFree Systems** is a global provider of telehomecare monitoring solutions.

**HomeFree Systems** is ISO 9000 certified.

**HomeFree Systems Ltd.** is a wholly owned subsidiary of the London listed Dmatek Ltd., an electronic monitoring technology specialist.

## [NEW] Resident Motion Monitoring

Each Personal Watcher is equipped with a motion sensor which continuously emits the resident's motion readings. These can be programmed to alert staff of movement during night or rest hours. Similar alerts can be scheduled to notify staff that a resident is mobile during morning hours.

## Wireless Nurse Call System

**HomeFree at Care Centers** wireless Nurse Call System give residents and staff both the freedom and the security to be independent and mobile.

- **Prompt** staff pager alerts clearly showing resident's identity and area location
- **Automatic** self-tests
- **A range of models:** pager, pendant, watch or pull cord
- **Comfortable,** lightweight and water resistant
